## Description of Change

Change the first sentence of the second paragraph in section 5.1.7.3 WP-162 and the first sentence of the first paragraph in section 2.7.5.4 SAP/FSP-41 to the following: "During each sampling and analysis period, groundwater from the wells listed in Table 4/Table 30 will be analyzed for the parameters of interest including additional or reduction of constituents assessed in Task 2 - Source Sampling and Task 7 - Groundwater Sampling."

Note: Include affected page number

## Justification and impacts of Change

Analytical data from the first two rounds of groundwater sampling indicate the presence of CN in 9 of the 44 wells located in the 200-BP-1 groundwater network. Analyses for total CN will be completed on all 200-BP-1 wells. FeCN and free CN analyses will be reduced to wells that indicate the presence of total CN. This practice will reduce cost without compromising data quality objectives.
